

Adidas US Sales — Power BI Executive Dashboard

Interactive Power BI project transforming 9,648 transactional records into an executive-level BI solution for Adidas US sales. The dashboard surfaces revenue, profitability, product and regional performance, sales-channel trends, and retailer contributions to support data-driven decisions.

Project Snapshot & Dataset

1

Dataset

Adidas US Sales Dataset — 9,648 records of transactional data across retailers, cities, states, and regions. Key columns: Retailer, Retailer ID, Invoice Date, Region, State, City, Product, Price per Unit, Units Sold, Total Sales, Operating Profit, Operating Margin, Sales Method.

2

Tools & Techniques

Power BI (visualization), Power Query (cleaning), DAX (measures), Data modeling, Excel. Emphasis on interactive reporting and KPI cards for executive clarity.

3

Author & Skills

Smruti Ranjan Samal — B.Tech (NIT Rourkela). Skills: Power BI, SQL, Python, Excel, Tableau. Demonstrated: data cleaning, modeling, DAX, dashboard design, storytelling.

Executive KPIs

\$77.70M

Total Revenue

Aggregate sales across all retailers and channels.

\$28.82M

Operating Profit

Net profit from operations reflected in dataset.

198K

Units Sold

Total units transacted across all channels.

41.79%

Avg Operating Margin

Indicates strong operational efficiency across products and regions.

\$48.76

Avg Price / Unit

Average selling price per unit across dataset.

Key Business Insights

Overall Performance

Adidas generated \$77.70M in revenue with \$28.82M operating profit. Sales show steady growth through the year with peaks in Nov-Dec and cumulative upward trend during 2021.

Product Performance

Top revenue drivers: Men's Street Footwear and Men's Apparel. Women's categories underperform relative to men's — opportunity for targeted marketing and expansion.

Geographic Highlights

Cities: Columbus and Manchester lead city sales. The Northeast region records highest revenue and profitability; sales distribution reduces single-region dependency.

Channel Performance

Online dominates with 56.9% of revenue, Outlet contributes 30.7%, In-store 12.4% — underscores importance of e-commerce investment.

Recommendations & Next Steps

01	02	03
1. Scale High-Performing Categories Increase inventory and marketing for Men's Street Footwear and Men's Apparel to capitalize on consistent revenue drivers.	2. Boost Women's Product Performance Launch targeted promotions and product assortment expansion to grow lower-performing women's segments.	3. Double Down on E-commerce Invest in personalized recommendations, digital marketing, and platform improvements to grow the 56.9% online revenue share.
04	05	
4. Regional & Seasonal Strategy Prioritize inventory and localized marketing in Columbus and Manchester; prepare inventory and campaigns ahead of Nov-Dec peak demand.	5. Analyze Growth Opportunities Investigate lower-performing regions and retailers for tailored initiatives; refine promotions and pricing to improve margins where possible.	

Recommended next steps: operationalize these insights into quarterly planning, update Power BI with rolling data refreshes, and build retailer-specific dashboards for targeted execution.
